

**NATIONAL COLLEGE
FOR NUCLEAR**

Assuring skills for a net zero carbon future

Learners

As our name suggests, The National College for Nuclear (NCfN) is a national college with a network of Further and Higher Education approved providers based in different locations in the UK. This means that the same nationally accredited courses can be taken at different locations, making it easier for you to access the courses you want.

NCfN is unique in that we work closely with employers to understand the jobs that they will need for the short and long term and help them to create job pipelines by providing tailored courses and qualifications to meet their needs.

The opportunities in nuclear are more exciting now than ever before. As well as significant decommissioning activities, nuclear new build will play an important part in the UK becoming a Net Zero economy. New Small Modular Reactors (SMRs) and Advanced Modular Reactors (AMRs) are becoming a reality and there have been significant strides in proving the commercial viability of nuclear fusion. All of this means that a career in nuclear can support a sustainable and greener future.

At the National College for Nuclear, we can help you study the courses that will make you ready to work, and play a part in this nationally important industry.

Understanding how to apply the skills and knowledge you gain in education to a nuclear context is extremely important. We work hand in hand with employers to include relevant experiences and examples into the courses we offer. Where needed, we source work placements which can introduce you to potential future working environments.

In most of our courses, we include up to 20% nuclear content and context with the other 80% being core underpinning skills and knowledge. This means that when you complete your studies, you

are 'work ready' for the nuclear industry. This is attractive to future employers. It also means that you have knowledge that can be easily transferred to other industries should you want to move to another sector. By studying with the NCfN, you will become a capable professional with the skills and behaviours needed to deliver the UK's industrial challenges.

Once you begin working in the nuclear industry, we can also help you to develop your skills throughout your career. We offer a range of courses from NVQs to Higher National Certificates, diplomas and degrees as well as short courses which can help you with your continued professional development. And if you are moving into the nuclear sector from another industry, we can also help you find the re-skilling you need.

Hands on
